MEADE WILLIS XRP
TRANSPORTATION MANAGEMENT SYSTEM

MEADE WILLIS

Meade Willis' Transportation Management System is a unique cloud-based shipping system built with "easy of use" as the first priority. By leveraging cloud-based technology, companies will always have the latest Information and services available without expensive upgrades of the traditional shipping systems.

TMS has multilingual/multicurrency capabilities, as well as multi-billing options and personalized billing by activity. The solution is fully capable of determining shipment options using a detailed rules engine, incorporating package size, weight, destination, contract level and desired delivery method. The system provides print shipping labels when needed and generates any required custom report. MW's TMS is configured to accommodate Business Rules and Requirements, allowing organizations the capability to define and deploy processes through the handling of complex existing requirements. TMS has customizable components for non-EDI/non-transactional process management and for off-line customers and suppliers. Some key features include:

- ✓ **Rate Shopping Function:** Enables retailers to take advantage of competitive delivery pricing offered by seamless access to a broad range of national and local carriers.

- ✓ **Free Updating:** Updates are automatic and have little impact on the day to day user activities.

- ✓ **Supports All Carriers:** Major carriers and country related ones.

- ✓ **Flexible Pricing Options:** Per label, monthly fee or a combination of the two.

- ✓ **Visibility of Users:** Allows the addition of users. Companies can define how they use the system and monitor how it's being used.

- ✓ **Import Functionality:** Perfect for the larger mailing. Uploading the data is all that is needed.

- ✓ **Pickup Request:** Allows companies to order a pick up from carriers.

- ✓ **Tracking:** Companies can track directly from the system.

- ✓ **Support Specialty Induction Routing:** Allows customers to have multi drop locations built into the system for easy access and discounted shipping rates.

- ✓ **Integration to WMS:** TMS can be incorporated into MW's WMS, which provides the automation of material -handling, and warehouse/inventory processes.
